

# Study of Soft Contact Lenses to Control Childhood Myopia (Nearsightedness)

## About the study

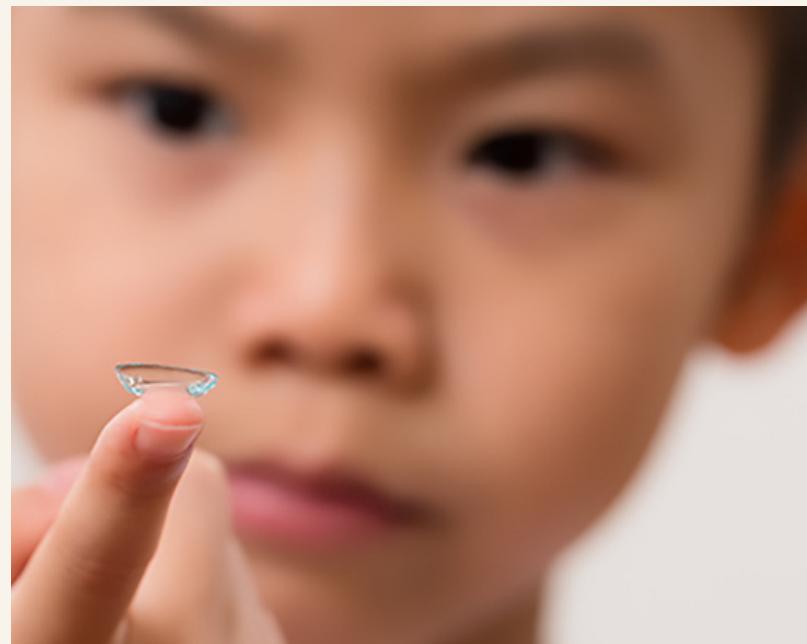

We are conducting an FDA-regulated clinical research study on the effectiveness of contact lenses that slows down nearsightedness (myopia).

Participants must be 8-12 years old at the beginning of the study and have up to -4.00 D of myopia.

## Children's Vision Lab

**424 Beacon Street  
Boston MA**

## Participants Will Receive:

- Complimentary eye exams.
- Supply of soft contact lenses for the duration of the study
- Compensation for time and travel
- In addition to helping science!
